INTRODUCTION

This scientific seminar aims to enhance academic and societal awareness of the importance of food control and its vital role in protecting consumer health and ensuring the safety of food products. It also addresses current challenges facing food safety systems and reviews modern scientific and legislative control mechanisms.

OBJECTIVES

Introduce the concept of food safety and its importance to public health

Review local and international food inspection and control mechanisms.

Discuss common food risks and mitigation strategies.

Promote consumer protection awareness and food rights.

Exchange expertise among academic, regulatory, and civil society institutions.

Link scientific research with practical application in food safety

1

Food safety legislation and regulations

2

Role of laboratory analysis in detecting food contaminants.

3

Food Fraud and Quality Assurance in Local Markets

4

Safety of traditional and herbal foods.

5

Foodborne pathogenic bacteria (case studies).

6

Role of civil society organizations in consumer protection.

SEMINAR THEMES
